

SEBA GPRS concept

(on SEBA internet server)

Example:
The data volume of 2 MB (Megabyte) for example corresponds to approx. 18,000 values per month with:

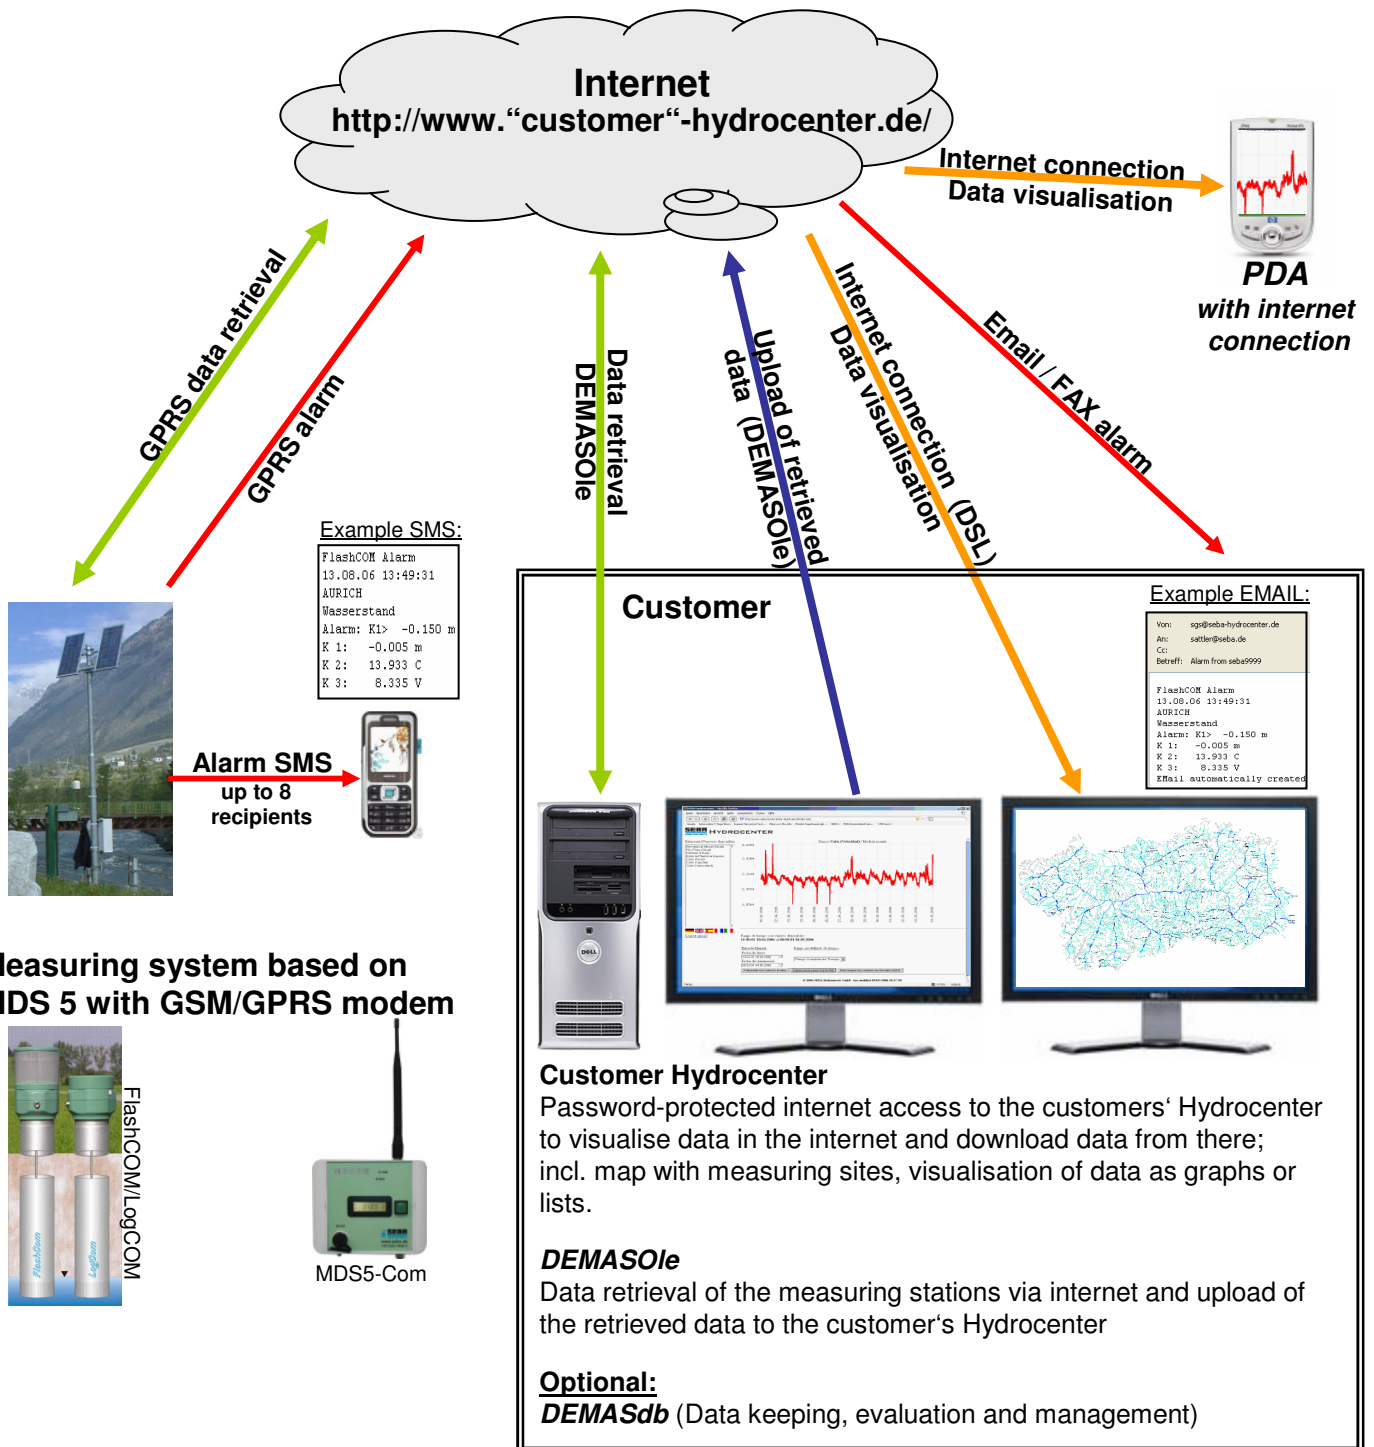

- 10-minute recording interval
- 4 channels (for example pressure, temperature, conductivity, pH)
- 1 data retrieval per day

The transmission charges depend on the number of data retrievals, the recording interval and the number of channels.

GPRS concept

(on customers' internet server)

Measuring system based on MDS 5 with GSM/GPRS modem
